---

## PROFILE

---

I ship production web applications end to end — from design hand-off through deployment and monitoring. Six years across React, TypeScript, PHP/Laravel and Node.js, currently building core learning, billing and localisation features at Evulpo inside a 30+ person product team with 10+ engineers. Outside client work I design and ship my own products, most recently VoiceSmith, an open-source macOS dictation app written in Swift.

## SKILLS

## EXPERIENCE

---

### Full-Stack Software Engineer — Evulpo

Mar 2022 – Present

Full-stack feature work on an e-learning platform inside a 30+ person product team with 10+ engineers — PHP, Laravel, Livewire and Tailwind CSS.

- Ship backend services and frontend features for core learning, content delivery and account flows as one of 10+ engineers in a 30+ person product team.
- Integrated Stripe to power subscription billing and recurring payments across the platform.
- Built an automated content-translation pipeline on DeepL's neural translation API to localise learning material across multiple languages.
- Designed and shipped REST API endpoints consumed by the mobile app and partner integrations.
- Use AI tooling (Cursor, Claude, GitHub Copilot) daily to integrate features faster without lowering the quality bar.

### Frontend Engineer — Inveon

Jun 2021 – Mar 2022

Built React and Next.js features for e-commerce platforms serving major brands including Columbia Sportswear and KOM.

- Built production frontend in TypeScript with Material-UI, focused on reusable, type-safe components.
- Authored a shared component library documented in Storybook and published to npm for reuse across client projects.
- Led the Sentry.io integration after evaluating error-tracking options, improving production observability and bug triage.
- Shipped through Jenkins CI/CD, Jira and GitHub workflows alongside cross-functional teams.

## Frontend Team Lead · React Developer — Nioya Tech

Oct 2020 – Jun 2021

Led a frontend team of 5 on an EU-funded project, coordinating delivery and code quality across the team.

- Led a team of 5 using GitLab and ClickUp for code review, planning, and delivery.
- Translated Figma designs into production-ready, responsive React components.

## Full-Stack Instructor — Clarusway

Jan 2020 – Jun 2021

Designed and delivered the full-stack curriculum for an intensive developer bootcamp.

- Taught HTML, CSS, JavaScript, React, Vue, and Node.js to 4 cohorts (250+ students).
- Built reference projects using Material-UI, Bootstrap, Chart.js, Firebase, and third-party APIs to anchor each module.
- Analysed market demand to shape course content toward employability, and ran workshops on frontend topics.

## Web Developer — Freelance

Dec 2019 – Oct 2020

- Built e-commerce tooling for product tracking and operational efficiency.

## PROJECTS

---

### VoiceSmith — Speak naturally. Write beautifully.

2026

A macOS menu bar app that turns dictation into finished writing. Double-tap Shift in any application, speak, double-tap again — the transcript is cleaned up and written straight into the field you were already typing in.

- Fifteen speech and text backends behind two Swift protocols — Apple Speech, Whisper.cpp and Ollama run entirely on-device; OpenAI, Anthropic, Groq and others use your own key.
- Global double-tap hotkeys and text insertion through the macOS Accessibility API, with dictated to-dos parsed into Apple Reminders via EventKit.
- No account, no backend, no telemetry — keys live in the Keychain and requests go straight to the provider.
- Universal binaries built, packaged and released by a GitHub Actions workflow.
- 7.6k lines of Swift · 15 AI providers · 99 languages — [voicesmith.idrisay.ch](https://voicesmith.idrisay.ch) · [github.com/idrisay/VoiceSmith](https://github.com/idrisay/VoiceSmith)

**Stack:** Swift 6 · SwiftUI · AppKit · SwiftData · AVFoundation · Speech · EventKit · GitHub Actions

## EDUCATION

---

### B.Sc. Electrical and Electronics Engineering

Sep 2011 – Jun 2015

Graduated 2nd in class · 3.67 / 4.0 GPA

## LANGUAGES

---

Turkish — Native · English — C1 · German — A2
